## IBAN-ISO13616-1997

[IBAN formats by country\[edit\]](#)

[This table summarises the IBAN formats by country:\[1\]](#)

The *kk* after the two-character ISO country code represents the check digits calculated from the rest of the IBAN characters. If it is a constant for the country concerned, this will be stated in the Comments column. This happens where the BBAN has its own check digits that use the same algorithm as the IBAN check digits

The BBAN format column shows the format of the BBAN part of an IBAN in terms of upper case alpha characters (A–Z) denoted by "a", numeric characters (0–9) denoted by "n" and mixed case alphanumeric characters (a–z, A–Z, 0–9) denoted by "c". For example, the Bulgarian BBAN (4a,6n,8c) consists of 4 alpha characters, followed by 6 numeric characters, then by 8 mixed-case alpha-numeric characters

Descriptions in the *Comments* field have been standardised with country specific names in brackets. The format of the various fields can be deduced from the BBAN field

### ISO3166-1A2 - RO Dept Codes

**ISO 3166-2:RO** is the entry for [Romania](#) in [ISO 3166-2](#), part of the [ISO 3166 standard](#) published by the [International Organization for Standardization \(ISO\)](#), which defines [codes](#) for the names of the principal [subdivisions](#) (e.g., [provinces](#) or [states](#)) of all [countries](#) coded in [ISO 3166-1](#).

Currently for Romania, ISO 3166-2 codes are defined for [41 departments and 1 municipality](#). The municipality [Bucharest](#) is the capital of the country and has special status equal to the departments.

[Each code consists of two parts, separated by a hyphen. The first part is RO, the ISO 3166-1 alpha-2 code of Romania. The second part is either of the following:](#)

one letter: municipality

two letters: departments

[The letters are currently used in vehicle registration plates.](#)

[Current codes](#)[\[edit\]](#)

Subdivision names are listed as in the [ISO 3166-2 standard](#) published by the [ISO 3166 Maintenance Agency \(ISO 3166/MA\)](#).

[Subdivision names are sorted in Romanian alphabetical order: a, ă, â, b-i, î, j-s, ș, ț, ț, u-z.](#)

Explanation of  
USD/USS/USN[[change](#) | [change source](#)]

The [US dollar](#) actually has three codes assigned: USD, USS (same day) and USN (next day). According to UN/CEFACT recommendation 9, paragraphs 8-9 ECE/TRADE/203, 1996, [available online](#):

8. In applications where monetary resources associated with a currency (i.e. funds) need not be specified and where a field identifier indicating currency is used, the first two (leftmost) characters are sufficient to identify a currency—example: US for United States dollars for general, unspecified purposes where a field identifier indicating currency is present. (A field identifier can be a preprinted field heading in an aligned document or a similarly-agreed application in electronic transmission of data.)

9. In applications where there is a need to distinguish between different types of currencies, or where funds are required as in the banking environment, or where there is no field identifier, the third (rightmost) character of the alphabetic code is an indicator, preferably mnemonic, derived from the name of the major currency unit or fund – example: USD for general, unspecified purposes; USN for United States dollar next-day funds, and USS for funds which are immediately available for Federal Reserve transfer, withdrawal in cash or transfer in like funds (same-day funds). Since there is no need for such a distinction in international trade applications, the funds codes have not been included in the Annex to the present Recommendation.
